PORTFOLIO OF SERVICES

Right-sized, comprehensive services you need today, to ensure a safer tomorrow.

GRA QUANTUM

GRA QUANTUM CYBER SECURITY SERVICES

Tailored, technology-agnostic cybersecurity services that help you plan, build and implement programs you can trust to enable business and protect your reputation.

In a world of ever-evolving threats, it gets tougher by the day for organizations to sidestep every possible attack. To react to today's problems and proactively anticipate tomorrow's, it takes a whole new set of rules. It's why our services are designed to meet your challenges from every possible angle.

"If you're not a security company, don't try to be one."

- Rick Orloff, CSO, Sr. VP of Operations, Kaseya

Our Approach

We exist because it takes a whole new set of rules to respond to today's problems and anticipate tomorrow's solutions. It requires a team experienced in the highest echelons of the private sector and government intelligence – a team comprised of people who care deeply about protecting society. And it demands a holistic understanding of the technical, physical, and human elements behind security threats.
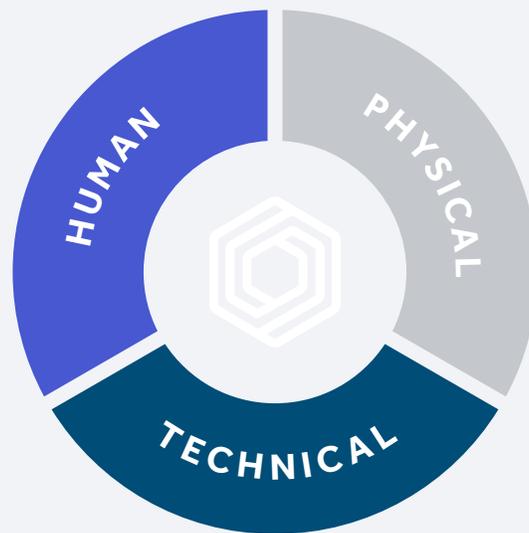

With GRA Quantum, you gain the foresight and expertise of an extraordinary cybersecurity services firm you can trust with today's security and tomorrow's reputation.

SCALABLE SECURITY SUITE

Full Service Security - Built to Scale

The Scalable Security Suite was created to give organizations a running start when it comes to security, providing them the same standard of security controls as large enterprises. As the organization scales personnel and business requirements over time, the Scalable Security Suite is designed to grow alongside those needs.

Our solution provides the necessary components to build and maintain a strong, enterprise-level security posture without the enterprise-level price tag, including:

Managed Security Services:

(MSS) is a customizable solution that removes the burden of dealing with cybersecurity from your organization. The core functions of the MSS include monitoring for threats and abnormal activity; alerting the appropriate parties of a potential incident; incident handling, which can take the form of isolating segments of a network or malware excision; and threat hunting led by experts to detect threats that technology cannot.

Professional Services:

From hardware provisioning and device management to asset tracking and endpoint protection, we'll assess and build the right security environment for your unique needs, carefully preserving and augmenting previous efforts and subscriptions as appropriate.

Comprehensive Security Needs Assessment:

Our initial discover will help you to determine the most prevalent gaps in your current security posture. We go beyond the ordinary cyber assessment to understand and mitigate acute physical and human-centric vulnerabilities that could have an effect to your operations.

Confidentiality

This is an essential ingredient for a successful security program. We provide privacy, confidentiality, and discretion for the organization and end-user.

Managed Security Services

Our Managed Security Services (MSS), a core feature of our Scalable Security Suite, will strengthen your cybersecurity stance while removing the burden of day-to-day functions of running a Security Operations Center (SOC) from your organization. Our technology-agnostic approach allows us to adopt the best-in-class technology for our SOC, including Security Information and Event Management (SIEM) and Managed Detection and Response (MDR) platforms.

By combining advanced technology with unparalleled human expertise, our MSS provides the core functions necessary to respond to the evolving threat landscape, including:

Monitoring:

Continual monitoring for threats and any abnormal activity across networks and endpoints is an essential part of our MSS that reduces the time it takes to detect and respond to threats, ensuring your company's sensitive data is protected at all hours.

Alerting:

Our MSS will provide the appropriate parties with comprehensive incident alerts, equipping your organization with the information it needs to react and respond to potential breaches.

Incident Handling:

Our experienced team will establish a plan for containing and eradicating threats, which may include isolating segments of a network or malware removal and mitigation, allowing your company seamless recovery to get back to business faster.

Threat Hunting:

It's not enough to rely solely on technology to protect your data. Our advanced threat hunting experts take a creative, proactive approach to finding and thwarting threats, providing maximum protection against advanced attack vectors.

PROFESSIONAL SERVICES

Tailored, technology-agnostic cybersecurity services that help you plan, build and implement programs you can trust to enable business and protect your reputation.

Plan & Assess

Security Risk Assessment

Our tailored risk assessments include cyber risk assessments as well as network security reviews. Our experts go beyond the traditional assessment to help you prioritize and remediate critical issues now, before they become devastating issues in the future.
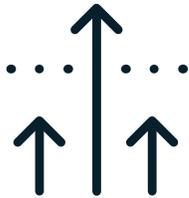

Penetration Tests and Vulnerability Management

Our extensive threat and vulnerability management services are designed to help you create and implement an effective and proactive security plan. We'll work with you through every stage of the assessment process to identify, classify, remediate and mitigate your vulnerabilities.

Prepare & Protect
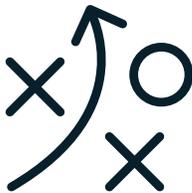

Insider Threat Programs

Prevent IP theft, fraud and sabotage with an effective Insider Threat Program. We offer more than technology, because you can't solve a human problem without understanding the human component.

Cyber Security Training

Threats continue to evolve and your team is faced with choices every day that can directly affect the security of your business. We've shared our expertise with Fortune 100 corporations, from the executive suite to technical development departments, to help proactively prevent and detect threats.

Secure Communications

In today's world, your data is at risk of theft no matter how it's stored. On a hard drive, in a boardroom, and even while in transit between devices. Our secure communications services aim to help you overcome this increasingly pervasive problem, from cyber security to physical security needs.

Secure Travel Program

We offer tailored training for executives planning for travel abroad. Clients from the Fortune 500, mainstream media, and high wealth individuals have paired executive travel security training with our secure communications services while traveling abroad to help ensure the security of their data and communications during and after their travel.

Readiness & Response

Table Top Exercises

Ensure that your security response plan is going to be effective when an incident occurs. Our team creates scenarios likely to affect your organization, built to test and assess your readiness, training your team to become faster and more efficient in responding to looming threats. These multi-scenario engagements are designed to imitate real world incidents and are complimented with meeting books and a thorough post analysis.

Incident Response, Digital Forensics and Insider Threat Investigations

Do you have a known or suspected incident? Our experts are on-hand to investigate, assess, remediate, and mitigate damage. Quickly and discreetly.
