SCALABLE SECURITY SUITE

Full-service security, built to scale

Scalable Security Suite is a tailored suite of services that takes on the burden of dealing with cybersecurity, so you can focus on what matters most: running your affairs.

Our partnerships enable us to provide growing organizations with technology and services often only available to organizations with 500+ employees. As your organization scales personnel and business requirements over time, the Scalable Security Suite is designed to adapt alongside those needs.

Scalable Security Suite provides the components necessary to build and maintain a strong, enterprise-level security posture, including:

- ◻ **Managed Security Services (MSS)** An essential component to any Scalable Security Suite solution, our MSS is a customizable solution that handles your day-to-day security needs and begins with a core of 24/7 monitoring, alerting, and incident response.

- ◻ **Comprehensive Security Assessment** Our initial discover will help you to determine the most prevalent gaps in your current security posture. We go beyond the ordinary cyber assessment to understand and mitigate acute physical and human-centric vulnerabilities that could have an effect to your operations.

- ◻ **Professional Services** From hardware provisioning and device management to asset tracking and endpoint protection, we'll assess and build the right security environment for your unique needs, carefully preserving and augmenting previous efforts and subscriptions as appropriate.

- ◻ **Confidentiality** This is an essential ingredient for a successful security program. We provide privacy, confidentiality, and discretion for the organization and end-user.

Already have some of your own technology in place?

No problem.
Our technology-agnostic approach allows us to incorporate into your environment while preserving your existing subscriptions and resources as needed.

How Does It Work?

The right-sized, tailored services you need today to ensure a safer tomorrow.

Step 1: Start with a Foundation of Core Managed Security Services (MSS)

All of our Scalable Security Suite solutions begin with a foundation of MSS, which includes monitoring for threats and abnormal activity, alerting for a potential incident and providing recommended remediation actions.

Bonus: By starting with a foundation of Core MSS, you get preferential pricing when you add on our professional service offerings.
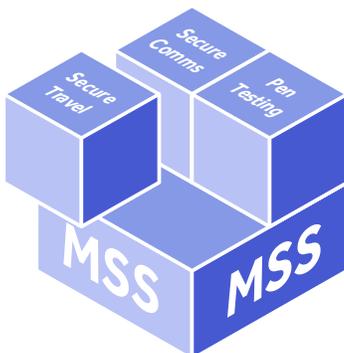

Step 2: Vulnerabilities and Needs Assessment

Our assessment process is tailored to your industry and size and is designed to understand your greatest vulnerabilities, budget, business priorities, and current technology.

Step 3: Recommend Custom Combination of Services to Address Your Security Needs

Based on the findings from the assessment, we will propose a custom solution that is most suited to your current risks and needs, with some possible offerings including insider threat planning, secure communications, penetration testing, and hardware provisioning.

Step 4: Customize Your Solution as Your Needs Change

As your business evolves, our solution evolves with you. We will make recommendations to add or drop certain services over time, so you are receiving the right solution for your needs, today and tomorrow.
